FastAPI (main.py)
Service orchestrator (service.py)
ContextService + WorkspaceManager
CAVR · SATRA · SABLE analyzers
Store + EvidenceBus (SQLite, hash-chained events)
Final gate (final_gate.py)
start run (manual, watch or replay)
1
POST /api/runs
2
create(scenario / source, SRS, plan, policy)
3
snapshot candidate workspace, baseline, applicable modules
4
save RunContext, emit run.created
5
202 Accepted (run id)
6
analyze() in a background thread
7
loop
[each applicable module]
alt
[inputs byte-identical to valid earlier evidence]
reuse evidence (evidence.revalidated)
8
[inputs changed]
par
[in parallel (ThreadPoolExecutor)]
analyze(context)
9
status, details, residual uncertainty
10
store Evidence (candidate snapshot, input hash, status, blocking flag)
11
decide(applicable, evidence, snapshot, input hashes)
12
ACCEPT / BLOCK / REVIEW + reasons
13
emit final_gate.changed
14
alt
[ACCEPT]
reconstruct clean workspace (fresh Git clone + verified files)
15
[BLOCK or REVIEW, auto-repair on]
bounded repair proposal, re-verified by the modules
16
GET /api/runs/{id}/stream, /evidence, /report
17
live events, evidence, final decision, report
