
Developer / reviewer
Orchestrator or SABLE API
SABLE analyzer (sable/analyzer.py)
Threat repository (sable_rules)
HCL parser (hcl_parser.py)
Policy semantics (policy_semantics.py)
Correspondence (correspondence.py)
Evidence + final gate
run with baseline + candidate Terraform
1
analyze(context)
2
load SABLE rules
3
alt
[rules missing or disabled]
UNKNOWN
4
[rules present]
parse baseline/infra and candidate/infra
5
resources, references, moves, parse errors
6
does the baseline satisfy the obligation?
7
alt
[baseline missing, not parsed or not holding]
UNKNOWN (unverified baseline)
8
[baseline verified]
rank successor candidates of the protected asset
9
hypotheses + conflicts, choose (score, margin)
10
alt
[no unique successor or principal unresolved]
UNKNOWN
11
[successor chosen]
evaluate obligation on the successor
12
known? holds?
13
PRESERVED / REGRESSED (UNKNOWN if not known)
14
store evidence (candidate snapshot, input hash)
15
module result + shared gate decision
16
